

ABSTRACT OF THE DISCLOSURE

A method of communicating between at least two electronic entities (121, 122, 123), involves a communication management unit (10) which uses a command/response protocol in order to communicate with the electronic entities (121, 122, 123). At least one of the aforementioned electronic entities (121, 122) communicates with the communication management unit (10) using wireless technology. The communication method includes a step consisting in saving a list of electronic entities in the communication management unit (10). The method can be used for microcircuit cards.
